

Preventive Care Appointments

Your child's health and well-being are our top priority at Pediatric Associates! To ensure our providers deliver the highest level of medical care to all our patients, our office follows the American Board of Pediatrics guidelines for pediatric standards. These guidelines require all patients to receive preventive care visits annually (and at specific age intervals), as well as any required immunizations. In these visits, the physician does a complete health examination which is essential to maintaining good health. If wellness visits and required immunizations are reluctant to be scheduled or kept, this will result in the child, and all siblings, to be discharged from our practice.

If you have any questions, please feel free to speak with one of our providers and/or nurses. They will be happy to address any of your concerns.
